

Manaus, March 10<sup>th</sup> 2019

Dear Editor-in-Chief,

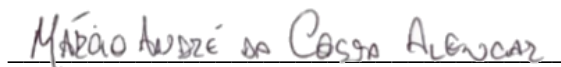

We are sending the manuscript entitled “Mining Implicit Correlations Between Distributed IoT Devices from Embedded Databases” by Márcio Alencar, Raimundo Barreto and Richard Pazzi. We would be grateful if you would consider attach the article for publication in “IEEE Internet of Things Journal”.

This is an original research that is not presently under consideration for publication elsewhere. It is free of conflict of interest and was conducted applying the highest ethical principles on research. This paper was a product of a partnership from Federal University of Amazonas and University of Ontario Institute of Technology supported by the Amazonas Research Support Foundation (FAPEAM).

All the authors contributed equally in the planning and execution of the study and have read and approved the final version of manuscript.

Please let us know of your decision at your earliest convenience.

Yours sincerely,

Márcio André da Costa Alencar
